GENERAL TOPICS AND PROJECT AREA

Since the archaeological spaces in urban marginal contexts are often in conditions of isolation and they are mostly unknown or not adequately shown, the workshop goal is to investigate the topic of the relation between archaeological nodes spread in urban spaces and city care. The topic will be addressed through a strategic vision that aims at overcoming the logic of the archaeological *enclave*, in order to transform spaces, materials, figures, which are part of the archaeological area into new possible places of urban inclusion, always considering the need for safeguard and enhancement of the ruins. The contemporary architectural project becomes a process of discovery of values already existing in context and waiting only to be found. To reason on this issue, the identification of three areas as case studies in the northern suburb of Neapolis is considered, where the valorization of the spaces of the different archaeological fragments placed in the contemporary landscape can play a significant role in processes of social and urban regeneration. In this archaeological areas, it is possible to experiment design devices that can establish new relationships between the spread ruins and the neighboring context, in a vital urban dynamic, also offering a development orientation for unfinished spaces, neighboring isolated architectures and real places of waste. In this framework, the main topics are: the issues of urban accessibility to the areas; the connection between the different archaeological ruins and the main urban elements of interest; the integration of the ruins in the urban context through the redefinition of the open spaces; the improvement of the perception of the ruins into the landscape and the social inclusion.
