GENERAL TOPICS AND PROJECT AREA

Archaeological spaces, especially those located in marginal urban contexts, are often in conditions of isolation and are mostly unknown or inadequately documented. The goal of the workshop is to explore the topic of the relationship between the archaeological nodes widespread in urban spaces and the volcanic water landscapes of the Campi Flegrei. The topic will be addressed through a strategic vision that aims to overcome the logic of the archaeological enclave, to transform spaces, materials, figures, which are part of the archaeological area into new possible places of urban inclusion. The contemporary architectural project becomes a process of discovery of values already existing in the context and just waiting to be found. To think about this topic, three study areas are identified, located in the strip of territory between the Lake Averno, port of Baia and Lake Fusaro. In these three study areas, the valorisation of the spaces of the different archaeological fragments located in the contemporary landscape can play a significant role in the processes of social transformation, urban regeneration and valorisation of the multiple co-present heritages. In the identified archaeological areas it is possible to experiment design devices able of establishing new relationships between the scattered ruins and the neighboring context, in a vital urban dynamic, also offering a development orientation for unfinished spaces, isolated neighboring architecture and real places of waste. In this framework the main themes are: the relationship between the archaeological layers and the volcanic forms of the earth; the issues of urban accessibility to areas; the connection between archaeological remains and main elements of urban interest; the integration of ruins into the urban context through the redefinition of open spaces; the improvement of the perception of the ruins into the landscape and the social inclusion.
